Summary

This dataset represents integrated facility information from FRS, limited to the subset of facilities that link to the Toxic Release Inventory (TRI).

Description

This dataset represents integrated facility information from FRS, limited to the subset of facilities that link to the Toxic Release Inventory (TRI). This subset of data was identified as information that can be used in the Hazardous Materials Emergency Support Function #10. Additional contact, state ids, NAICs, and SIC attributes are linked by registry id. It contains only active facilities. This feature contains location and facility identification information from EPA's Facility Registry System (FRS) for the subset of facilities that link to the Toxic Release Inventory (TRI) System. TRI is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities. FRS identifies and geospatially locates facilities, sites or places subject to environmental regulations or of environmental interest. Using vigorous verification and data management procedures, FRS integrates facility data from EPA's national program systems, other federal agencies, and State and tribal master facility records and provides EPA with a centrally managed, single source of comprehensive and authoritative information on facilities. This data set contains the subset of FRS integrated facilities that link to TRI facilities once the TRI data has been integrated into the FRS database. Additional information on FRS is available at the EPA website <http://www.epa.gov/enviro/html/fii/index.html>. **** NOTE April 2017, MARIS extracted the MS portion of this data set for distribution ****
