Summary

This dataset represents facilities which engage in slaughtering, processing, and/or warehousing for the purpose of producing poultry and egg products. Facilities where poultry is raised or where eggs are laid are not included in this dataset. *** NOTE See attached .html for full metadata ***

Description

This dataset represents facilities which engage in slaughtering, processing, and/or warehousing for the purpose of producing poultry and egg products. Facilities where poultry is raised or where eggs are laid are not included in this dataset, as they are included in a separate layer. The source data used for this data layer does not include any facilities in American Samoa, the US Virgin Islands, or Wyoming. Records with "-DOD" appended to the end of the [NAME] value are located on a military base, as defined by the Defense Installation Spatial Data Infrastructure (DISDI) military installations and military range boundaries. At the request of NGA, text fields in this dataset have been set to all upper case to facilitate consistent database engine search results. At the request of NGA, all diacritics (e.g., the German umlaut or the Spanish tilde) have been replaced with their closest equivalent English character to facilitate use with database systems that may not support diacritics. The currentness of this dataset is indicated by the [CONTDATE] field. Based upon this field, the oldest record dates from 01/22/09 and the newest record dates from 07/10/09. The following use cases describe how the data may be used and help to define and clarify requirements. 1) A threat against agricultural facilities has been identified and protective measures must be taken to protect the food supply. 2) A disaster has occurred, or is in the process of occurring, and facilities in the vicinity must be identified in order to comprehensively evacuate and secure the area. TGS was not tasked with ensuring the completeness of this layer.

*** NOTE April 2017, MARIS extracted the MS portion of this data set for distribution ****
